Vamos a realizar la máquina windows en cuestión, yo creo que por el nombre de la máquina se puede llegar a notar como la máquina es un Domain Controller aún así queda pendiente ver klk

Esta máquina no se porque motivo con la red doméstica no la he podido encontrar por lo que la he puesto en un red nat que sera la eth1 de la máquina linux.

Para encontrar la IP en este caso he tenido que hacer un arp-scan eth1 --localnet y he visto que la única IP aparte de la mia era la x.x.x.10 por lo que he podido literalmente identificarla de esta forma.

Realizamos un primer NMAP y vemos los puertos habituales de windows abiertos.

```

Ahora con estos usuarios podemos llegar a probar sin credenciales un as-rep roast attack. Sorprendentemente con tantos usuarios y no consigo absolutamente nada, al parecer he flasheado bastante por aquí. Tocará hacer enumeración para ver si logro ver algún password escondido.

```

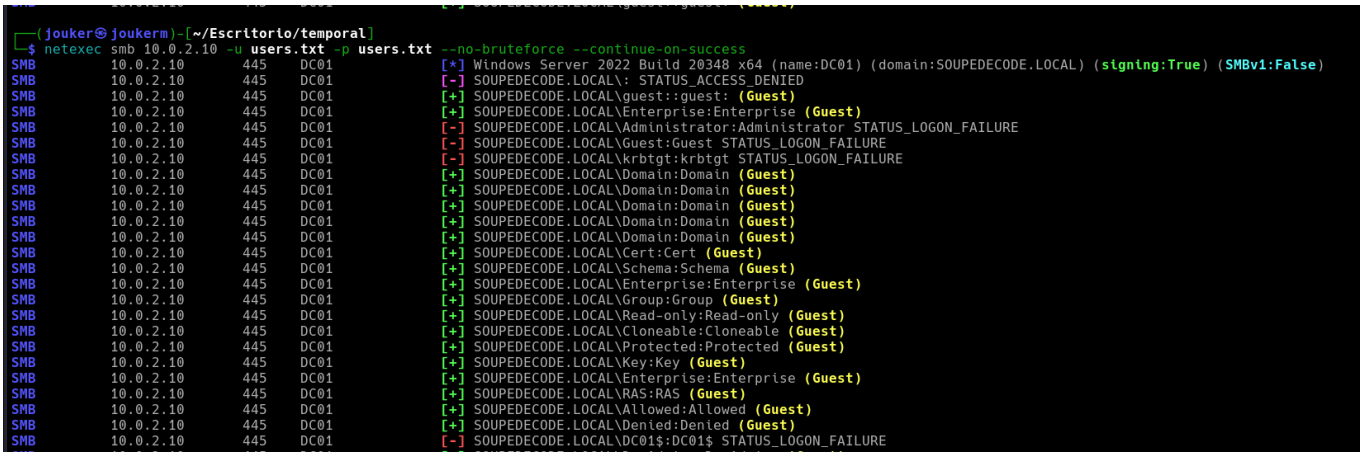
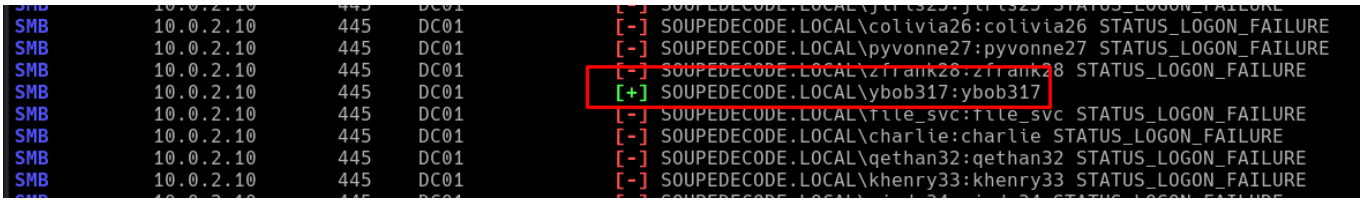
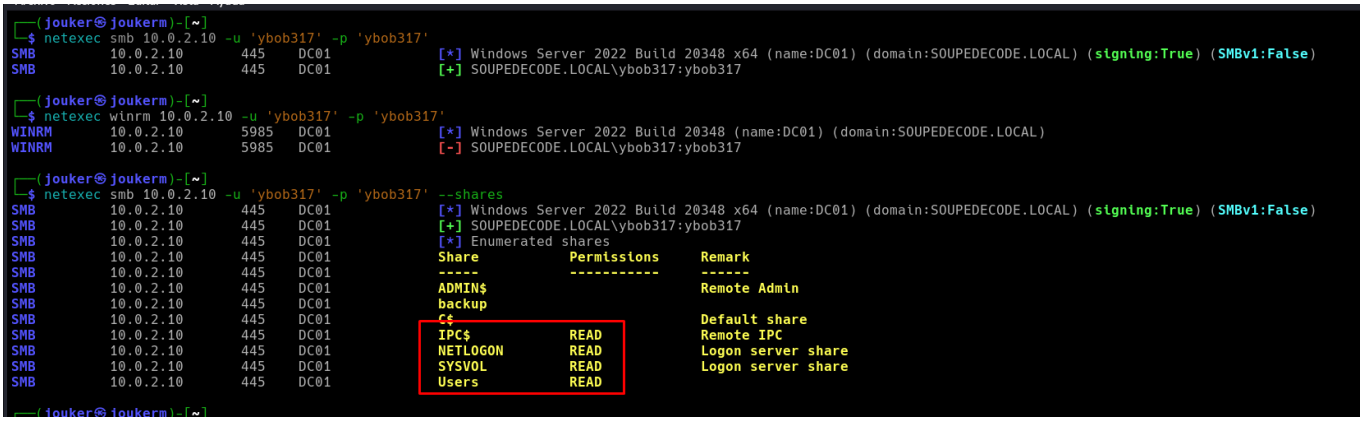
Realmente no tenemos más alternativa ya que cuando nos metemos dentro con smbclient, nos dice que realmente no podemos listar el contenido dentro de IPC$, así que no queda otra alternativa que hacer literalmente fuerza bruta de usuarios con los propios usuarios, con el parámetro no bruteforce simplemente probaremos el usuario ñema22 con el password ñema22, pero no con el resto de usuarios. El parámetro continue on success hace que no se pare al encontrar un positivo. Vemos como todos los usuarios aquí presentes son guest menos 1...



El usuario ybob317 tiene su mismo nombre de user como password.



No hay winrm pero si que hay acceso a otras carpetas compartidas que no teníamos antes.



Hace pinta de que de esta forma vamos a obtener la flag de usuario, pero poco más realmente la flag me da igual solo quiero seguir la máquina,

```

Todos los hashes siguientes han sido obtenidos, ahora a ver que se puede hacer con esto de por aquí, a mi me interesa sobretodo el backup_svc más que nada porque tiene pinta de que podremos hacer el habitual ataque de DCSYNC y pillar la SAM y la SYSTEM sin problemas, o no?

```

Backup extract?

Hashes NTLM al parecer, demasiado fácil

```
