```

Por lo poco que puedo interpretar hace pinta de que el puerto 21, esta comunicado con el puerto 80 de alguna manera, es decir que seguramente en el futuro me voy a encontrar un subdirectorio que

sea este FTP. Por lo pronto dejo esto sin tocar.

```

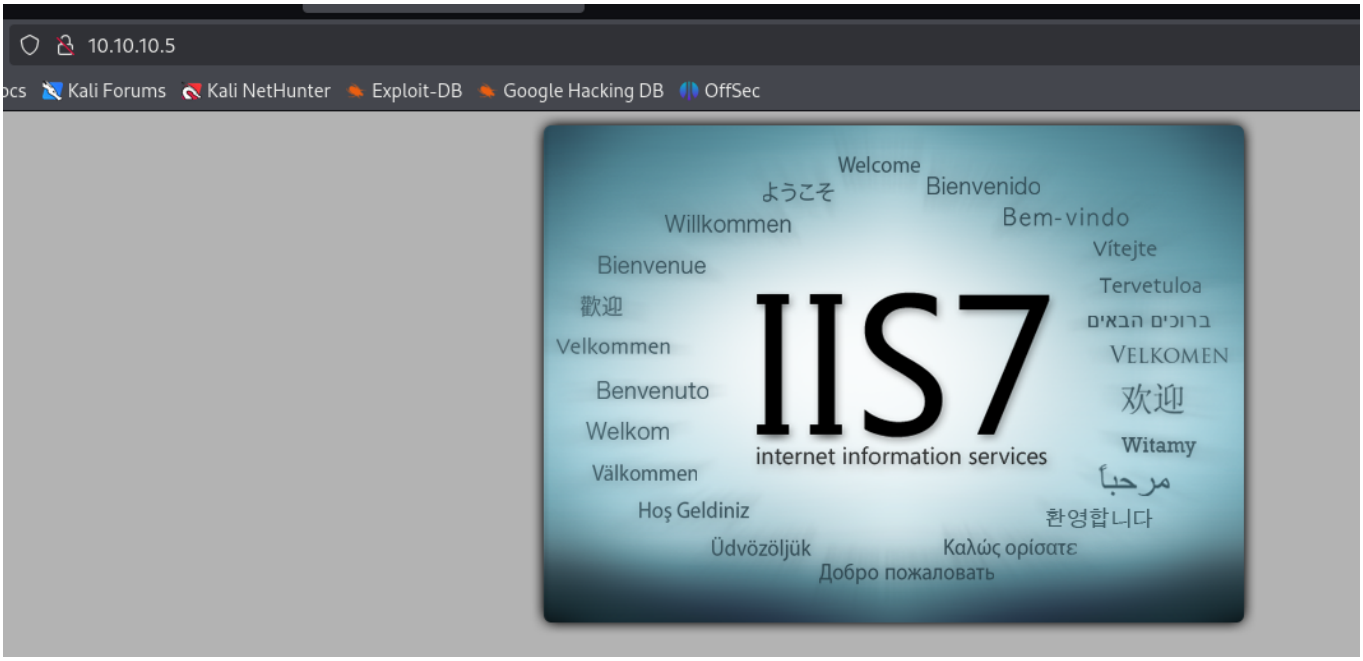
whatweb del puerto 80:

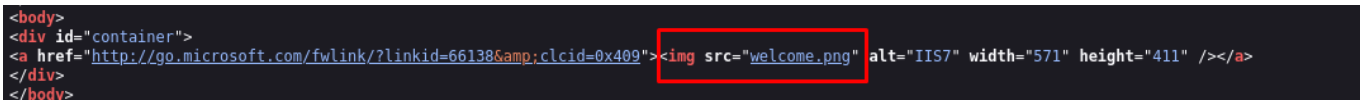
```
┌──(jouker㉿joukerm)-[~]
└─$ whatweb 10.10.10.5
http://10.10.10.5 [200 OK] Country[RESERVED][ZZ], HTTPServer[Microsoft-IIS/7.5], IP[10.10.10.5], Microsoft-IIS[7.5][Under Construction], Title[IIS7], X-Powered-By[ASP.
```

Dejo esto por si acaso, pero no hace pinta ya que no nos suele interesar un DOS.

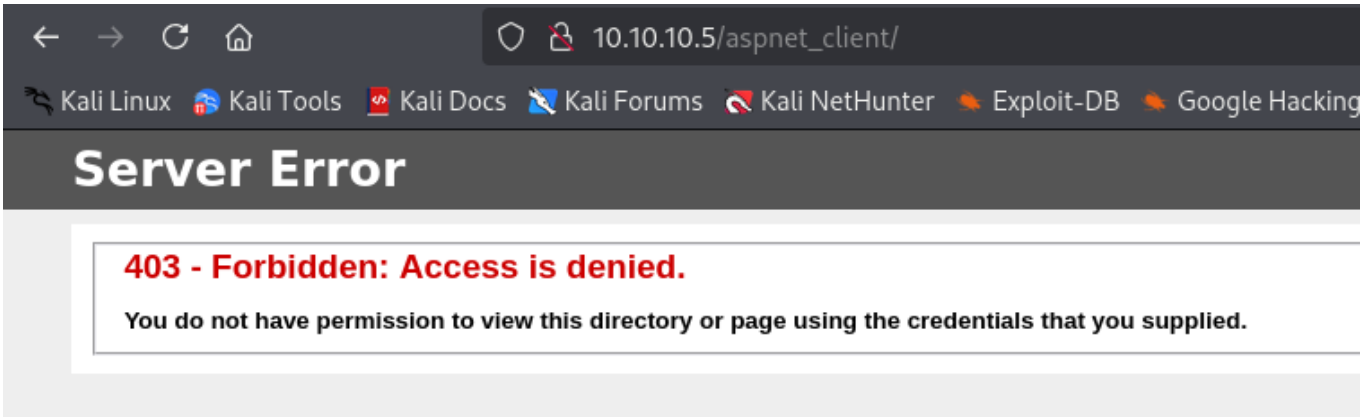
```
┌──(jouker㉿joukerm)-[~]
└─$ searchsploit IIS 7.5
 Exploit Title                                                                  |  Path
Microsoft IIS 6.0/7.5 (+ PHP) - Multiple Vulnerabilities                       | windows/remote/19033.txt
Microsoft IIS 7.5 (Windows 7) - FTPSVC Unauthorized Remote Denial of Service (PoC) | windows/dos/15803.py
Shellcodes: No Results
```



Al hacer control + u y comparándolo con los resultados que he visto antes, literalmente veo que es el mismo repositorio que el de FTP.



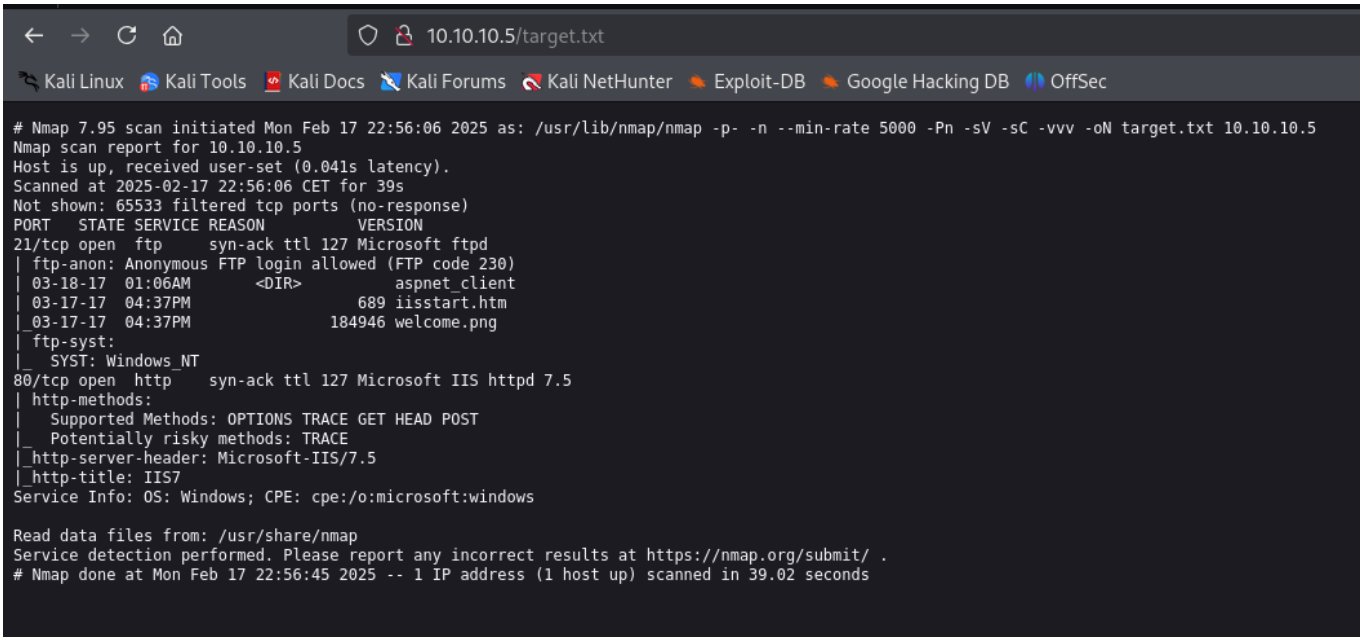
Efectivamente la teoria es cierta, así que voy a aprovechar para ver si mediante FTP puedo subir archivos para sí colar algún tipo de reverse shell aunque sea con msfvenom



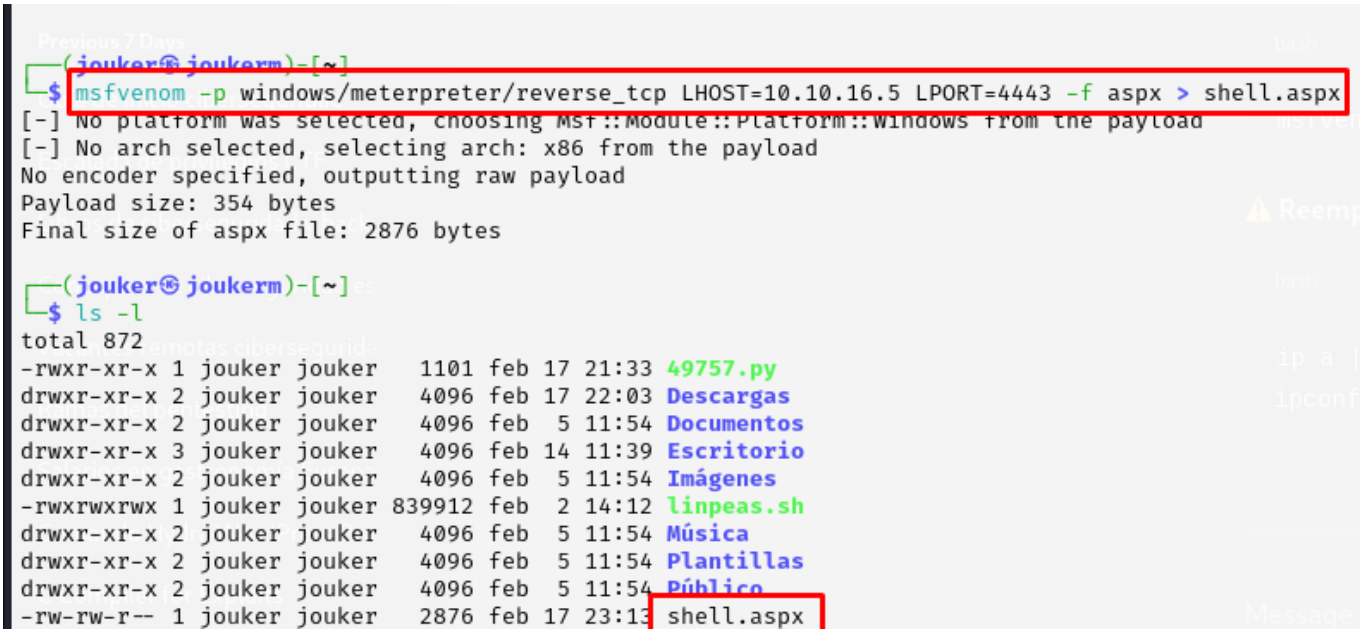
Hago una prueba con un archivo que tengo de target.txt a ver si lo localizo.

```
226 Transfer complete.
ftp> put target.txt
local: target.txt remote: target.txt
229 Entering Extended Passive Mode (|||49164|)
125 Data connection already open; Transfer starting.
100% |**********************************************************************************************************************************************************************|  1195        3.94 MiB/s    --:-- ETA
226 Transfer complete.
1195 bytes sent in 00:00 (8.18 KiB/s)
ftp>
```

Si, se sube, ahora solo queda ver que más puedo colar



Creación de exploit ASPX con msfvenom:



```
Remote system type is Windows_NT.
ftp> put shell.aspx
local: shell.aspx remote: shell.aspx
229 Entering Extended Passive Mode (|||49165|)
125 Data connection already open; Transfer starting.
100% |**********************************************************************************************************************************************************************|  2916       40.89 MiB/s    --:-- ETA
226 Transfer complete.
```

Ponemos en el modulo exploit/multi/handler de metasploit TODO IGUAL QUE EL MSFVENOM que hemos generado para que así obtenga el meterpreter necesario. Seguidamente le damos a run para ponernos en escucha

Conseguimos shell reversa con meterpreter, solo que ahora queda la escalada de privilegios.
